

Make life LOADS EASIER -

with an electric powered sack truck
from MGB easy handling

Manufactured
in the UK

SCANCAD
SERVICES LTD

Specifically designed for moving monumental headstones. The new GoodsMan 300 M is a significant leap forward for shifting a stone from a van to your door, around your premises, over distances of grass, gravel and slopes.

Also making a much more time and cost efficient solution yet reducing risk of damage to goods and people.

With a capacity of up to 400kg this electric sack truck makes light work of moving your work.

It's safe, easy to use, versatile and robust.

Larger tyres are a great bonus for the rougher of terrains. Sitting at a lean back angle to keep the stone on-board at rest.

A lower toe-plate position layback angle gives this machine much better balance in transit.

This model includes rubber frame covers for stone protection, a security strap and resin filled tyres for self healing after a puncture.

All the usual user-friendly benefits of the GoodsMan 300 but much better in making your work far less strenuous.

- Ergonomically designed tillerlever is easy to use - even in your gloves
- Forward and reverse drive
- 2 speed operation for safe and easy transit over even the roughest terrains
- Torque assisted movement to transit position
- Weatherproof
- Battery charge monitor
- Right and left handed drive
- Lightweight
- 1 year return to base limited warranty

The detachable 3rd castor wheel gives the added benefit of the machine being able to be a powered trolley making moving the stone a mere stroll for the taller stone or on a longer journey.

When removed, the GoodsMan M takes up no more space than a standard sack truck.
